Summary	I'm a Computer Science student at 1337 Coding School, focusing on C, C++, and web development, while using Unix to solve software engineering problems. My work combines creativity with coding to tackle complex challenges.	
Education	1337 Coding School Software Engineering	October 2022 - Present
	ALX Software Engineering	February 2023 - November 2024
Projects	Portfolio Simple and stylish portfolio using Next.js, Tailwind CSS and Framer Motion https://amzilyouness.me Movie Finder App This is a Movie Finder application built with React and Vite. It allows users to search for movies and view trending movies using the TMDB API. The app also tracks search counts using Appwrite. https://yoamzilmovie.vercel.app/ Inception This project aims to broaden knowledge of system administration by using Docker. Virtualizing several Docker images, creating them in a new personal virtual machine. C++ Modules These C++ modules cover the essentials and some advanced topics, giving me a solid handle on namespaces, classes, and memory management with pointers and references. They also include things like operator overloading, inheritance, and error handling with try/catch. Plus, I got to dive into advanced features like different types of casting, templates, containers, iterators, and algorithms.	
Skills	C / C++	HTML & CSS
	Docker	Javascript
	Next.js	React
Languages	English	Arabic
