Summary	I'm a Computer Science student at 1337 Coding School, focusing on C, C++, and web development, while using Unix to solve software engineering problems. Our work combines creativity with coding to tackle complex challenges.	
Education	1337 Coding School Software Engineering	October 2022 - Present
	ALX Software Engineering	February 2023 - November 2024
Projects	Inception This project aims to broaden knowledge of system administration by using Docker. Virtualizing several Docker images, creating them in a new personal virtual machine. C++ Modules These C++ modules cover the essentials and some advanced topics, giving me a solid handle on namespaces, classes, and memory management with pointers and references. They also include things like operator overloading, inheritance, and error handling with try/catch. Plus, I got to dive into advanced features like different types of casting, templates, containers, iterators, and algorithms. DrumKit A working Drum Kit which uses keyboard and mouse clicks to play sounds made with vanilla JavaScript. Ft_transcendence This project is centered around the design, development, and organization of a full-stack web application, a multiplayer game designed to offer a unique experience and the thrill of Classic PingPong !	
Skills	C / C++	HTML & CSS
	Docker	Javascript
	Git & Github	Next.js
Languages	English	Arabic
